Functional & Performance Testing Template

ACL Performance Test

Date	7 October 2026
Team ID	
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	ACL is created and active	Open System Security > Access Control (ACL) Search the script ACL for the table (e.g., incident, read)	ACL is active, type = record, operation = read, script is present		
FT-02	Public record is accessible	Impersonate a user with the itil role (not assigned) and open a record with Sensitivity = Public	Record opens normally		
FT-03	Confidential record – assigned user	Impersonate the assigned user and open a Confidential record assigned to that user	Record opens; user can view the details		
FT-04	Confidential record – other user	Impersonate a user with the itil role who is not assigned and open the same Confidential record	Access is denied; record is not shown		
FT-05	Confidential record – privileged role	Impersonate a user with the privileged role and open the Confidential record	Record opens		
FT-06	List view restriction	Impersonate a non-assigned user and open the table list view	Confidential records are not listed; Public records are listed		
FT-07	Report restriction	Impersonate a non-assigned user and run a report on the table	Confidential records are not included in the report		
FT-08	Write operation	Assigned user edits and saves a Confidential record; non-assigned user tries the same	Assigned user can save; non-assigned user cannot edit		
FT-09	Empty or unexpected field value	Create a record with an empty Sensitivity value and open it as a non-privileged user	Access is denied by default (script returns false)		
PT-01	Record open time	Open a record with the ACL script active and note the page load time	Should be under 3 seconds		

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
PT-02	List load time	Open a list containing about 1,000 test records as a non-assigned user	List loads under 3 seconds		
PT-03	Multiple users at the same time	Open restricted and public records from several users at the same time	No errors; the correct allow / deny result for every user		
PT-04	Script efficiency check	Review the ACL script for heavy queries (e.g., GlideRecord inside the script)	No heavy queries; only the required fields are checked
