Project Design Phase-II
Data Flow Diagram & User Stories

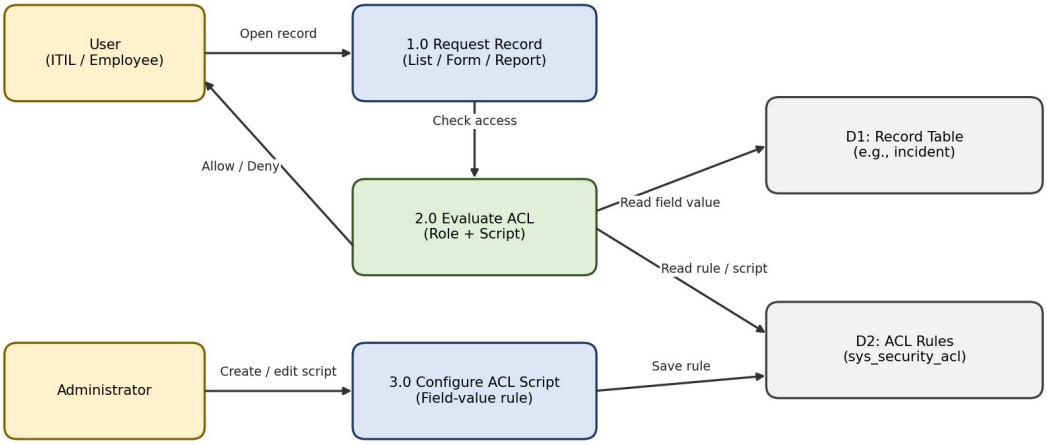

Date	7 October 2026
Team ID	
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example: Script-Controlled ACL – Restrict Record Access Based on Field Value – https://www.servicenow.com/docs/r/yokohama/platform-security/access-control/exploring-access-control-list.html?contentId=oczJQGZK~1lGzH~ITrwZHg

Data Flow Diagram (Level 1) – Script-Controlled ACL

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Administrator	Script-Controlled ACL	USN-1	As an administrator, I can create a record-level ACL with a script for the table.	ACL is saved and active	High	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
		USN-2	As an administrator, I can check the field value (e.g., Sensitivity) inside the ACL script.	Script returns true / false based on the field value	High	Sprint-1
	Reusable Access Logic	USN-3	As an administrator, I can move the access logic into a Script Include for reuse.	ACL calls the Script Include successfully	Medium	Sprint-2
Authorised User (Assigned user / Caller)	Field-Value Based Record Restriction	USN-4	As an authorised user, I can open a Confidential record assigned to me.	I can view and edit the record	High	Sprint-1
	Operation Coverage	USN-5	As an authorised user, I can see the allowed records in the list view and reports.	Allowed records appear in lists and reports	Medium	Sprint-2
Unauthorise d User	Field-Value Based Record Restriction	USN-6	As an unauthorised user, I cannot open or see a Confidential record.	Record is hidden / access is denied	High	Sprint-1
Security / Compliance Officer	Administration & Testing	USN-7	As a security officer, I can test the ACL by impersonating different users.	Results match the expected access for each user	High	Sprint-2
	Administration & Testing	USN-8	As a security officer, I can review the ACL script to confirm the rule for audits.	Script is documented and readable	Low	Sprint-3
